this book is designed to demonstrate the need for thermoelectric energy materials including non conventional materials for heating and cooling applications in thermoelectric energy efficient devices in addition to the fundamentals functionalities and classifications associated with thermoelectric energy materials that can be used in industries this book explores how these materials can contribute to high energy efficiency and sustainability even though they are used in waste heat recovery systems climate change and global warming are also taken into consideration features exclusively focuses on non conventional thermoelectric materials deals with key areas for new generation thermoelectric materials such as nanostructured materials and non traditional materials highlights the right thermoelectric material selection their design characterization and testing covers additive manufacturing 3d printing for highly customized and efficient thermoelectric devices includes case studies based on real world applications this book is aimed at researchers and graduate students in materials science and clean technologies

this book presents select proceedings of the international conference on pollution

control for clean environment icpcce 2023 it introduces readers to the recent emerging pollutants in air and water environments and in solid waste and sheds light on the newly developed control strategies the book discusses various topics including the occurrence of emerging contaminants micropollutants in water wastewater and aquatic environments occurrence pathways surface and groundwater pollution and risk and impact assessment of pollution the chapters provide advanced information topics including effective monitoring detection sustainable practices cleaner and innovative water and wastewater treatment technologies and emerging contaminant removal the book also includes information on energy positive technologies and recent advances in the upgradation of existing systems it also extensively discusses life cycle assessment and the application of environmental indicators and circular economy in pollution control strategies the book covers the interaction of pollutants in the atmosphere and discusses innovative air pollution control strategies including a detailed discussion of carbon capture and storage the book presents various strategies for managing solid waste and discusses several novel technologies for the management of the present day concern of plastic waste and e waste given the present day need for the recovery and re use of various waste materials this book delves extensively into how waste materials can be used for different purposes it also talks about the recovery of energy and other useful by products contributing towards economical and sustainable solutions the book discusses various case studies on recently developed technologies and evaluates a wide range of technologies for pollutant removal and their implementation in the field this book provides a ready reference for environmental engineers practitioners policymakers and planners it also served as a practical guide for industrial engineers government bodies ecologists and researchers

this book provides comprehensive coverage of the theoretical developments and technological breakthroughs that have deepened our understanding of environmental pollution and human health while also promoting a comprehensive strategy to address these problems the respective chapters highlight groundbreaking concepts fueling the development of environmental chemistry and toxicology revolutionary analytical and computational approaches providing novel insights into environmental health and nature inspired innovative engineering solutions for tackling complex hazardous exposures the book also features a forward looking perspective on emerging environmental issues that call for new research and regulatory paradigms laying the groundwork for future advances in the broad field of environmental chemistry and toxicology written by respected authorities in the field a new paradigm for environmental chemistry and toxicology from concepts to insights will offer an invaluable reference guide for concerned researchers and professional practitioners for years to come

microwave assisted sample preparation for trace element analysis describes the principles equipment and applications involved in sample preparation with microwaves for trace element analysis the book covers well established applications as well as new trends in this field hot topics such as sample preparation for speciation metabolomics and halogen determination as well as the alternatives of sample preparation for special samples for example carbon nanotubes polymers petroleum products are also discussed the use of microwaves in sample preparation has increased in recent decades several applications of microwaves for sample preparation can be found in the literature for practically all types of sample matrices especially for the determination of trace elements by atomic spectrometric techniques safely and cleanly reducing the time involved in this step microwave assisted sample preparation is not only a tool for research but also for routine analysis laboratories the state of the art in sample preparation in trace element analysis this book is the only resource for chemists specifically focused on this topic the first book to describe the principles equipment and

applications in microwave assisted sample preparation written by experts in the field who provide a comprehensive overview of the important concepts introduces new alternatives and trends in microwave assisted techniques

reactive but not a reactant heterogeneous catalysts play an unseen role in many of today s processes and products with the increasing emphasis on sustainability in both products and processes this handbook is the first to combine the hot topics of heterogeneous catalysis and clean technology it focuses on the development of heterogeneous catalysts for use in clean chemical synthesis dealing with how modern spectroscopic techniques can aid the design of catalysts for use in liquid phase reactions their application in industrially important chemistries including selective oxidation hydrogenation solid acid and base catalyzed processes as well as the role of process intensification and use of renewable resources in improving the sustainability of chemical processes with its emphasis on applications this book is of high interest to those working in the industry

this book presents recent advances towards the goal of enabling efficient implementation of machine learning models on resource constrained systems covering different application domains the focus is on presenting interesting and new use cases of applying machine learning to innovative application domains exploring the efficient hardware design of efficient machine learning accelerators memory optimization techniques illustrating model compression and neural architecture search techniques for energy efficient and fast execution on resource constrained hardware platforms and understanding hardware software codesign techniques for achieving even greater energy reliability and performance benefits discusses efficient implementation of machine learning in embedded cps iot and edge computing offers comprehensive coverage of hardware design software design and hardware software co design and co optimization describes real applications to demonstrate how embedded cps iot and edge applications benefit from machine learning

artificial intelligence or ai now affects the day to day life of almost everyone on the planet and continues to be a perennial hot topic in the news this book presents the proceedings of ecai 2023 the 26th european conference on artificial intelligence and of pais 2023 the 12th conference on prestigious applications of intelligent systems held from 30 september to 4 october 2023 and on 3 october 2023 respectively in kraków poland since 1974 ecai has been the premier venue for presenting ai research in europe and this annual conference has become the place for researchers and practitioners of ai to discuss the latest trends and challenges in all subfields of ai and to demonstrate innovative applications and uses of advanced ai technology ecai 2023 received 1896 submissions a record number of which 1691 were retained for review ultimately resulting in an acceptance rate of 23 the 390 papers included here cover topics including machine learning natural language processing multi agent systems and vision and knowledge representation and reasoning pais 2023 received 17 submissions of which 10 were accepted after a rigorous review process those 10 papers cover topics ranging from fostering better working environments behavior modeling and citizen science to large language models and neuro symbolic applications and are also included here presenting a comprehensive overview of current research and developments in ai the book will be of interest to all those working in the field
